Happy Holidays!

Warmest wishes for a joyous holiday season and a happy New Year!

From your Friends at Altitude Information Systems

Top 10 reasons why you might want to consider a CRM Program for your business

1. Your sales department is working from multiple spreadsheets to track sales.
2. You have employees in the field who could benefit from having remote access to client information, such as outstanding invoices, history of items purchased, notes or demographics.
3. You have various departments working from separate spreadsheets or programs. This creates funnels of information, which makes it nearly impossible to effectively manage a business.
4. You would like to create a step by step workflow process for your sales department to ensure successful sales and accurate forecasts.
5. You want the ability to measure the success of a marketing campaign.
6. Create effective and accurate sales forecasts and projections.
7. Store documents and track all client communication for future reference.
8. You want to manage your staff time better.
9. View all client issues from support, sales, accounting and customer service.
10. You want the ability to create a script and a workflow for full time or temporary telemarketers.

Save on ACCPAC CRM Options

Take as much as 25% off select CRM options when you purchase ACCPAC CRM or CRM SalesTeam (any edition). CRM options include CRM Integration Server, CRM Solo, CRM Wireless Mobile User and CRM CTI Server.

How To Get The Most From Your Yellow Pages Advertising

Secrets of this powerful advertising tool by www.isquare.com

The Yellow Pages are a terrific medium because of one simple reason: they are a directive medium (as opposed to a reactive medium --like a newspaper ad or TV spot.) In other words, people use them when they're ready to buy!

Which means you can (and should) load up your ad with everything you want to say about your capabilities and services --and people will read literally EVERY word. Because for the most part, they've already DECIDED to buy, and your Yellow Pages ad is the best possible chance to get them to call you so you can CLOSE the sale!

How much should you spend in the Yellow Pages?

There's only ONE rule that applies to advertising budgets for the Yellow Pages. And if you can afford to do this, you should follow that rule. It is, simply...have a larger ad than the rest of your competition. Because when you have the largest ad, 30 percent of Yellow Pages shoppers --motivated, ready-to-buy people --will call you first.

Technical Corner

Technical Tip - Hiding and Showing Columns Within A Data Entry Grid

Did you know, beginning with the release of ACCPAC Advantage Series 5.0, it's easier than ever to hide and show columns within a data entry or inquiry grid? Utilizing these steps can help speed-up data entry and make it easier to view important information.

To hide a column you don't need to see, right-click on the column title, select COLUMN TITLE from the popup menu. For example, if you don't need to see Location Code in the Order Entry detail grid, right-click on the LOCATION column title and select "Hide Location". The column will be hidden.

To show hidden columns, right-click on any column title, then select RESTORE COLUMN. The column will be restored.

ACCPAC retains column preferences by screen, and by user ID, so any changes you make to column setup will

be remembered the next time you use that screen. The changes you make will not affect other users.

Automate Reporting in Advantage Series using Macros

Businesses always require recurring reports. The ACCPAC Advantage Series **Macros** menu provides functionality that helps automate repetitive reporting tasks – allowing you to present timely reports to management while saving valuable time at period-end.

Simple macros, such as, printing an aged cash requirement report, or performing day-end, can be defined using the **Record Macro** option. Using this option, you can “teach” the application what needs to be performed by performing that task yourself, the first time.

To start the macro recording:

1. Select **Macro > Start Recording** from the Advantage Series desktop. A small red icon appears on the application status bar indicating that the macro recording has started.
2. Specify the macro file name and location.
3. Indicate if all or only changed fields need to be recorded in the macro. If you intend to manually change the macro later, it is recommended to choose the *Record All Fields* option.
4. Click **OK** to start recording. Everything you do, such as printing all monthly reports for a specific profit center or printing all weekly reports for your manufacturing plant, is recorded and copied to the specified macro file.
5. To stop the macro recording, select **Macro > Stop Recording**. You have the option to make modifications to the recorded macro or to close the editor.
6. To run the recorded macro, select **Macro > Run**. Select the macro that you wish to execute and click **Open**.

Once a macro is recorded, it can be made available to all or specified users. You can also create an icon for this macro on your Microsoft® Windows® or Advantage Series desktop, which can then be executed with a single-click.

Do you print a fixed set of reports periodically? Do you wish to print your reports with a single click of a button? Please give us a call to learn more about VBA macros and how you can considerably reduce the time spent on daily, weekly or monthly report processing.
